Peace of Mind

PROFESSIONAL

We have an unrivalled technical department of which we are immensely proud. Our technical team is acknowledged for having an ability to offer the best advice when it comes to specifying and problem solving even the most difficult of projects for our customers. From framing queries to glazing options or locking types to sound / heat insulation choices, we have the product range to meet the most discerning requirements!

ENERGY

We use **1.1** 'U' Value argon gas filled double glazing as standard. Together with our high performance frames we offer 'A' to 'C' rated windows. New to our collection is the highest performing PVCU window currently manufactured in the UK with an overall **0.8** 'U' value for frame and glazing combined, meeting the **2016 'A' rated code level 6** for sustainable homes. In the current economic climate reducing heating costs benefits not only the consumer's pocket but the environment at large. We have taken the time to do the research for you and can advise on the best solution for your home to balance heat retention with value for money.

SECURITY

All our products use the latest technology in locking systems to ensure high performance long term. In tests, they not only met the requirements of the police preferred initiative, '**Secured by Design**,' but in fact doubled the performance needed to ensure compliance. Internal beading coupled with our **BS 'Class A'** profile (currently the highest attainable) complete the security picture.

FINISHES / COLOURS

Our white windows have a particularly smooth finish achieved through a slow extrusion process to minimize cleaning needs and ensure long lasting good looks. Cherrywood (Light oak) and Rosewood are also offered in a foil finish.

Bright, contemporary or subtle. Choose from any RAL or Heritage colour

In order to stay ahead of our competitors we also provide any RAL colour using the latest cutting edge paint technology. This process chemically bonds the paint to the substrate to form a permanent coating of superior durability.

White, Light Oak or Rosewood
